Quick-release mechanism „QuickLock“

High availability thanks to patented quick-release mechanism

Production time is money – and downtime due to faults is very expensive. But this can be minimised, thanks to our patented ‘QuickLock’ mechanism. One person working alone and without tools can swap out a panel in 10 seconds: position, lock into place – ready. Mechanically, pedestal or suspension arm mounting is possible, at various angles of pivot and tilt. The PC ports and interfaces are easily accessible in the generously proportioned, lockable terminal compartment, while being securely protected from unauthorised personnel.

The device ID and/or control console configuration data is saved onto a storage medium located in the terminal compartment on the suspension arm system. If the control panel is replaced/reinstalled, this is then re-registered at the corresponding console by data transmission from the storage medium/quick-release mechanism adapter. This ensures that the control panel is always ready to use – thereby avoiding long periods of production downtime.

Benefits of our quick-release adapter

- Can be installed on suspension arm systems in a few seconds – just fit and lock into place
- No tools required
- Anti-theft protection (E1 or other closure) and detent on locking bolt
- Continuously adjustable rotate/tilt function with end stop (20° up/down and 350° left/right)
- One-person panel installation and replacement
- All connections can be pre-installed (depends on suspension arm system)
- Large terminal compartment with various interfaces
- Can be fitted to all 48 mm Ø, GTN II and CP60/40 suspension arms
- Integrated, automatic device identification for panel installation/change
- Additional preconfigured hardware connection options
